

# Dominate Your Next Social Gathering through Charisma!

PJ | LeaRning

Academics can be socially awkward. Lucky for you, you can overcome your fear of social interactions with this R Quarto task! Finally, science is *doing something that actually helps people!*

You must figure out something interesting to say at the next party you go to! I have an idea:

- How about telling people, out of the *Adelie*, *Chinstrap*, and *Gentoo* penguins, what kind of male penguin weighs the most?

That should do it! People love that sort of trivia, and they will love you for telling them about it!

## Step 1: Dataset

We will be using the dataset `penguins` from the `palmerpenguins` package.

## Step 2: Installing packages

Make sure you have the `tidyverse`, `palmerpenguins`, and `praise` packages installed.

## Step 3: Loading packages

Load `tidyverse`, `palmerpenguins`, and `praise`.

```
library(tidyverse)
library(palmerpenguins)
library(praise)
```

#### Step 4: Figure out what kind of male penguin weighs the most

```
filter(penguins, sex == 'male' & body_mass_g >= 5000)  
# Thank you Stephen for this wee bit of code.
```

Know you know!

#### Step 5: Go to a party, and amaze the other guests with your knowledge about penguins!

*Before you go!* Don't forget to run this last bit of code:

```
praise()
```

```
[1] "You are bedazzling!"
```

Figure 1: Image: *\*In David Attenborough voice\** Here we see a Gentoo Penguin in his natural habitat.
